

Congratulations ...

on beginning your nursing career. Houston Healthcare's hospitals are exceptional facilities for the new RN graduate with less than one year of experience to make the transition from student nurse to an independent registered nurse. We offer the latest technology in a variety of nursing units within manageable size facilities. Our Medical-Surgical RN Residency Program provides the new nurse with clinically significant classroom instruction as he/ she works closely with a preceptor on a nursing unit.

Our residency program is led by a Residency Coordinator who collaborates with unit-based Clinical Coordinators and preceptors to ensure a well-rounded orientation experience that will help you build your clinical skills and confidence.

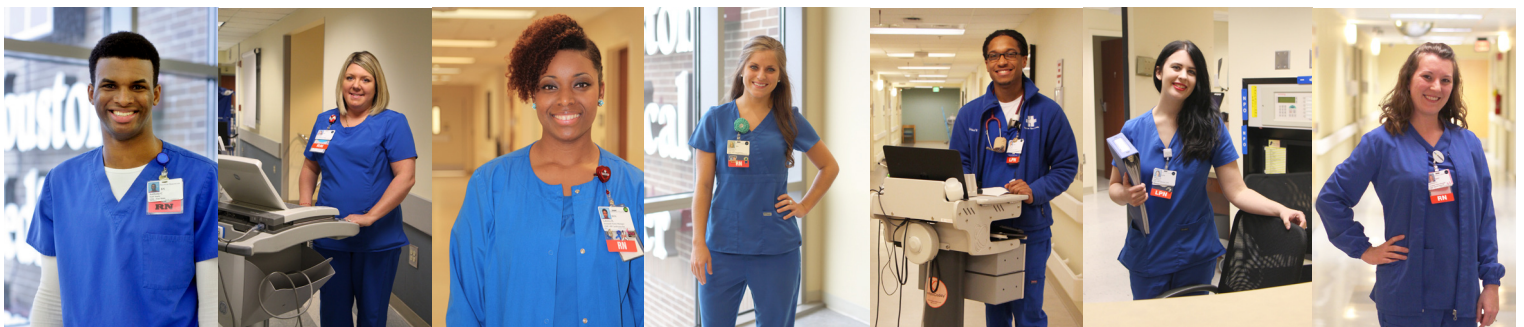

Why A Residency Program?

- A Nurse Residency Coordinator to act as your coach and support you throughout the program.
- Clinical Coordinators available on the unit-based level
- Hand-selected preceptors to provide one-on-one assistance during your clinical rotation.
- A Support Group in which peers will work together to support each other throughout the experience.
- Case Study Analysis
- A Professional Development Plan customized by the Nurse Residency Coordinator that focuses on your needs to enhance your clinical experience and career.
